

Deployment 52406_1012

(NDBC 52406 - North East Solomon - 370 NM North East of the Guadalcanal)

Location

Latitude: -5.293

Longitude: 165.002

Depth: 1826 m

Ocean region: 2.3 - Tropical Pacific Ocean

Time Span

Start Date: 2010-07-06

End Date: 2012-04-19

Notes

Data downloaded from http://www.ndbc.noaa.gov/historical_data.shtml

For tsunameter data from the NDBC (largely from the Deep-Ocean and Reporting of Tsunamis network), information regarding deployment and recovery dates is limited. Therefore, annual files of quality controlled data are initially concatenated for each station and plotted in order to identify the start and end times of each deployment. The data are segmented into individual deployment time series, so the deployment and recovery dates are assumed dates.

Raw NDBC data have varying sampling frequencies depending upon the operating mode (i.e. whether there is a tsunami alert). Standard operating mode (1) uses 15 minute spot values, mode 2 data consists of 1 min averages of 4X15 sec spot values and mode 3 is 15 second sampling. Mode 3 data were sub-sampled to the frequency of mode 1, but mode 2 data were not compatible and were treated as missing.

Raw pressures were obtained in metres from NDBC but had been converted from psia using a conversion factor of 0.67. The true conversion should have used 0.68947573, so to convert to mb, we multiplied by $102.9 = 0.68947573/0.67*100$.

Possible effects of an earthquake off the coast of Honshu can be seen in the data between 11/03/11 and 14/03/11.

This record contains several unexplained datum shifts.

An offset of 185 bar was removed from the data.

These data must be treated with caution as the station is located in an area of seismic activity.

Latitudes, longitudes and depths specific to this deployment were not available, so they are taken to be those shown for the latest deployment on webpage www.ndbc.noaa.gov/station_page.php?station=52406 as at 17/10/2014.
